

Animals Are Classified

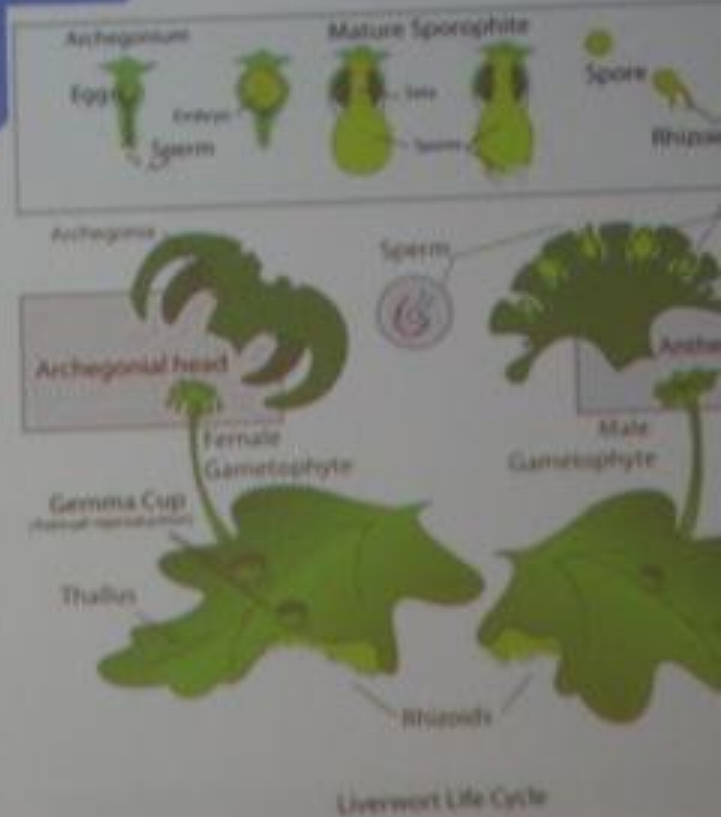

Biologists
sort plants
by how
they:

Vascular plants have tubes that connect leaves, stems, and roots. This is how water and nutrients are transported.

Non vascular plants have no tubes, roots, stems, or leaves.

Examples of
non vascular
plants are
mosses and
liverworts.

Spores

Ferns and Mosses

They don't make seeds. Mosses are the largest group and reproduce by spores.
