

Please do not touch the butterflies
Their wings are easily damaged

Orange Wings Amazon
Jemima

Subspecies: Orange and blue-green color
Size: 10-12 cm
Other: 1-2 years

This species is **CITES II** listed due to threats from the pet trade.

Jemima is a very friendly parrot who likes to chatter away to people. She will whistle back to you, say hello and even sometimes say her own name!

But if she starts screeching or shouting out you please walk away.

She will think it's a good way to get attention and continue doing it.
Thank you.

Please **do not** feed Jemima or put your fingers through the cage. She will bite and can easily break your finger!

Tropical Gardens

WHERE ARE ALL THE PLANTS?
Give the water the Tropical
plants are grown and not back
to the ground for new growth, and
the plants will not grow up
the structure

 
Ins

The first sign displayed here tells the butterfly's story from the moment of its birth. It shows a caterpillar on a leaf, a chrysalis, and an adult butterfly. The text explains the life cycle and the role of butterflies in the ecosystem.

The second sign shows a butterfly on a leaf with a small insect nearby. The text discusses the butterfly's diet and its role in the food chain.

Parasites and Predators

The third sign shows a butterfly on a leaf with a small insect nearby. The text discusses the butterfly's diet and its role in the food chain.

The fourth sign shows a butterfly on a leaf with a small insect nearby. The text discusses the butterfly's diet and its role in the food chain.

This sign provides additional information about butterflies, including their role in the ecosystem and their life cycle.
